Today at the morning briefing, day shift operations chief John Flannigan said “Very impressive work so far, we need to keep making progress”. With the potential for new fire starts to grow rapidly, crews have been notified that they have initial attack responsibility to help the local district.

The north, east, and west sides of the fire are holding well and looking good. Fire crews are taking their time through the mop-up process and insuring that areas are cool. The south end of the fire was the last place to have containment line put in and has more heat closer to the line to work on. Two crews overnight used infrared cameras to detect heat. On the north side of the fire, they found isolated pockets of heat within 200 feet of the control lines. In other areas of the fire they found hotspots and flagged them for dayshift crews to suppress.

Air operations will be available at the helibase today when needed. Flights will be conducted throughout the day to monitor and look for areas that need support.

Overhead personnel are meeting with Bureau of Land Management (BLM) to discuss a suppression repair plan. They will coordinate a plan to mitigate or eliminate environmental resource impacts caused by the fire suppression effort and rehab the area to as natural conditions as possible.

The Oregon Department of Forestry’s ODF Team 1 will continue to manage the fires in the complex until they are safe to turn back to the district.

FIRE ACREAGES BY FIRE:

- Pleasant Creek 836
- Grave Creek/Section 14/Ditch Creek 7,816
- Spencer Creek 228
- King Mountain 6
